EDUCATION

Jaypee University of Information Technology

Jul 2023–May 2027

B.Tech in Computer Science Engineering (AI & Data Science)

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Java, SQL

Systems & Architecture: Distributed Systems, Scalability, Concurrency, System Design, Performance Analysis, Debugging

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

ML / AI: TensorFlow, PyTorch, Regression, Classification, Clustering, Neural Networks, Recommendation Systems

Libraries / Frameworks: NumPy, Pandas, Scikit-Learn, OpenCV, React.js, Node.js, Express.js, FastAPI, spaCy

Tools: MongoDB, Git, GitHub, VS Code, Jupyter, Colab, Power BI, Tableau, Cursor, GitHub Copilot

EXPERIENCE

RepCard Private Limited

Gurugram, India

Software Engineering Intern

Jun 2025–Jul 2025

- Diagnosed root causes of recurring edge-case bugs and shipped targeted fixes for an active production user base, reducing reported issue frequency by ~30% through systematic debugging and code analysis.
- Designed and delivered two scalable backend modules in a Node.js/Express environment; led architecture discussions with cross-functional teammates, aligning on maintainability standards to reduce future refactor effort.
- Championed software engineering best practices—modular design, peer code review, and CI integration—across a growing codebase, improving system reliability and reducing onboarding time for new contributors.

PROJECTS

Employee Goal Management Portal

Demo

- Centralized performance-management workflows for 50+ simulated users by architecting a full-stack system (React.js, Node.js, Express.js, MongoDB) consolidating 3 disconnected processes—goal creation, approvals, and reviews—into one scalable platform.
- Led end-to-end system design, implementing JWT + RBAC auth and enforcing authorization boundaries across all API endpoints with zero role-escalation vulnerabilities found in testing.
- Built automated reporting pipelines delivering scheduled performance summaries to managers, eliminating manual aggregation and surfacing actionable insights in real time.

Behavioral Fraud Awareness & Simulation Platform

GitHub

- Built a fraud-simulation platform handling parallel user sessions, integrating an XceptionNet-based ML classifier (PyTorch / TensorFlow) for multi-class scam detection across phishing, deepfake, OTP, and social-engineering categories.
- Architected the ML pipeline for extensibility—new attack-type modules plug into the core classifier without modifying inference logic—enabling rapid addition of emerging fraud patterns with no regression in existing detectors.
- Designed user-facing behavioral assessments with personalized risk scoring, combining realistic attack scenarios with prevention guidance to measurably improve cybersecurity awareness outcomes.

Doctor Prescription OCR System

- Eliminated transcription errors in handwritten/printed prescription processing by building a hybrid pipeline (OpenCV, Tesseract OCR, spaCy NER, Regex) outputting validated structured JSON records per prescription.
- Architected a fault-tolerant system with spaCy as default, optional OpenAI LLM augmentation for complex cases, and automatic fallback—improving robustness across diverse handwriting styles without single-point failures.
- Shipped a production-ready REST API (FastAPI) with real-time OpenFDA drug validation, comprehensive test coverage, and YAML-configurable parameters for drop-in deployment across new environments.

College Marketplace with Recommendation System

Demo

- Improved product discoverability by implementing a TF-IDF + cosine similarity recommendation engine with KNN-style matching, surfacing relevant listings with sub-second latency across 500+ catalogue items.
- Decoupled the recommendation layer from the product-listing service, enabling independent scaling and future algorithm upgrades without frontend or ingestion pipeline changes.

CERTIFICATIONS & ACTIVITIES

Functional Data Structures and Algorithms • Agentic AI and Generative AI Applications • System Design • Deloitte Data Analytics Virtual Experience

Coordinator, Literary & Debating Club (2025–26) • Multiple Hackathon Participant
